Bijou is located at the fringe of the future Greater Southern Waterfront, which extends from Pasir Panjang to Marina East and is set to be developed in 5-10 years' time. Under the URA Draft Master Plan 2019, the area is envisaged to be a gateway to live, work and play with 1,000 ha of land for future development.

Bijou is set to benefit from the transformation of this major gateway and is well-connected to public transport nodes and amenities.

# Plans to rejuvenate city centre, waterfront

Plan to encourage mixed-use development in CBD so there'll be activities beyond office hours

Derek Wong

Singaporeans can expect a rejuvenated city centre, with moves under way to encourage more mixed-use development in the Central Business District "so that there will be activities beyond office hours".

Giving an update on ongoing and future plans to transform the cityscape, National Development Minister Lawrence Wong said there will be a review of a scheme that has allowed eligible commercial buildings to maximise their use through bonus plot ratios.

Speaking during the parliamentary debate on his ministry's budget, he said: "We will explore new incentives to better support rejuvenation in the CBD. Specifically, we

want to encourage more mixed uses in the CBD, such as residential and hotel, so that there will be activities beyond office hours."

The Raffles Place, Tanjong Pagar/Maxwell and Robinson/Shenton areas are dominated by older office buildings, unlike the Marina Bay CBD extension which was planned as a mixed-use district, he added, noting most eligible buildings have already made use of the scheme.

Mr Wong also noted plans to revamp Orchard Road, like having different precincts with more diverse offerings, to make the stretch "one of the great streets of the world".

In reply to Nominated MP Walter Theseira, who felt that favouring private development over public use for high-value areas would worsen social stratification, he

said the Government also intends to continue "injecting public housing" in central areas. "We have already been doing so in small pockets and we will plan to do so in a bigger way with long-term rejuvenation."

Mr Wong said getting the balance right would be difficult: Pricing new HDB flats in prime areas according to market value would see only the well-off get them, but giving huge discounts may lead to a "lottery effect" when

owners sell their flats.

"The lucky guy who gets the flat gets a so-called windfall, compared to others who buy flats elsewhere. Then it's not a fair distribution of housing subsidies," he said.

The long-term solution is to en-

sure that every town is well-developed, with good amenities and convenient access to transport nodes and job centres near home, he said.

While these efforts do not "automatically equalise property values", the Government can "temper some of the excesses in the market".

Mr Wong also highlighted plans for three major gateways in the east, west and north of the island.

These key developments will help create more jobs and increase opportunities for Singaporeans to work closer to their homes.

Meanwhile, work to redevelop the 800ha Paya Lebar Air Base site, which is bigger than Ang Mo Kio town, will start after 2030.

Work on the Greater Southern Waterfront will start sooner, in the next five to 10 years. The project over 2,000ha of prime waterfront land – six times Marina Bay's size – will span more than 20 years.

Added Mr Wong: "Over time, we will redevelop and stitch together the entire waterfront from Pasir Panjang to Marina East."

Calling climate change an existential threat, he said the risks and impact of sea level rise have been studied carefully and the Government is looking at detailed measures to protect Singapore's coastal areas. These may include reclamation, sea walls or pumping stations.

"These are long-term investments, but we are preparing well ahead and putting in place the necessary protective measures within the next 20 to 30 years," he said.

The Urban Redevelopment Authority will launch the draft Master Plan 2019 exhibition later this month for public feedback, he said. The plan, reviewed every five years, guides development over a 10- to 15-year time frame.

Singapore

DEVELOPMENT of the Greater Southern Waterfront will begin in five to ten years with certain precincts, kicking off with Pasir Panjang Power District and the site of the existing Keppel Club.

Under the Draft Master Plan 2019, the Greater Southern Waterfront – which stretches across the southern coastline from Pasir Panjang to Marina East – will total 2,000 hectares (ha) and is envisaged to be a gateway for live, work and play. About 1,000 ha of land from the 2,000 ha site will be freed up for development after the City Terminals and Pasir Panjang Terminal are shifted to Tuas.

Mount Faber has also been earmarked as one of the precincts that will be developed within the next five to ten years as part of the Greater Southern Waterfront.

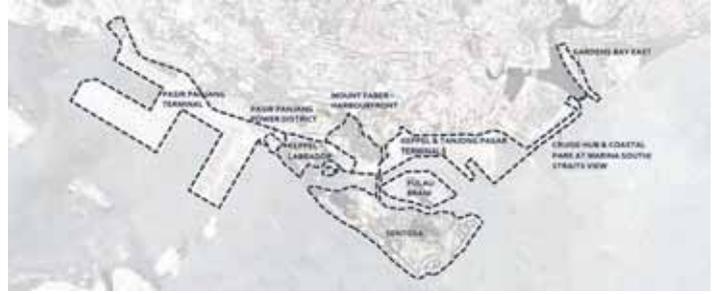

Pasir Panjang Power District will be “given a new lease of life as a lifestyle and heritage destination,” said the Urban Redevelopment Authority (URA) on Wednesday, adding that agencies are already looking at potential ways to reuse the former power station buildings and open up the grounds for public access. URA and the Singapore Land Authority will be initiating a competition next month to reach out to the public for potential ideas for the precinct.

Meanwhile, the site that is occupied by the Keppel Club will be redeveloped into a new residential pre-

dict by the waterfront when the current lease expires in 2021. The site is near both Telok Blangah and Labrador Park MRT stations.

In addition, the Master Plan sketched out preliminary ideas for the redevelopment of the site where Paya Lebar Air Base currently sits. Among the ideas mooted are re-purposing the former airport buildings and parts of the runway into community spaces while retaining the area’s aviation heritage; creating a network of parks and open spaces for leisure; and building neighbourhoods for future residents.

Paya Lebar Air Base was formerly Paya Lebar Airport, which was Singapore’s second international airport from 1955 to 1981. From 2030, Paya Lebar Air Base will be relocated, with

Areas that make up the Greater Southern Waterfront. PHOTO: URA

the assets and facilities to be housed at Changi Air Base and Tengah Air Base.

Transport connectivity for residents in the adjoining areas is expected to improve as they reduce travelling time by going through the future town instead of around it.

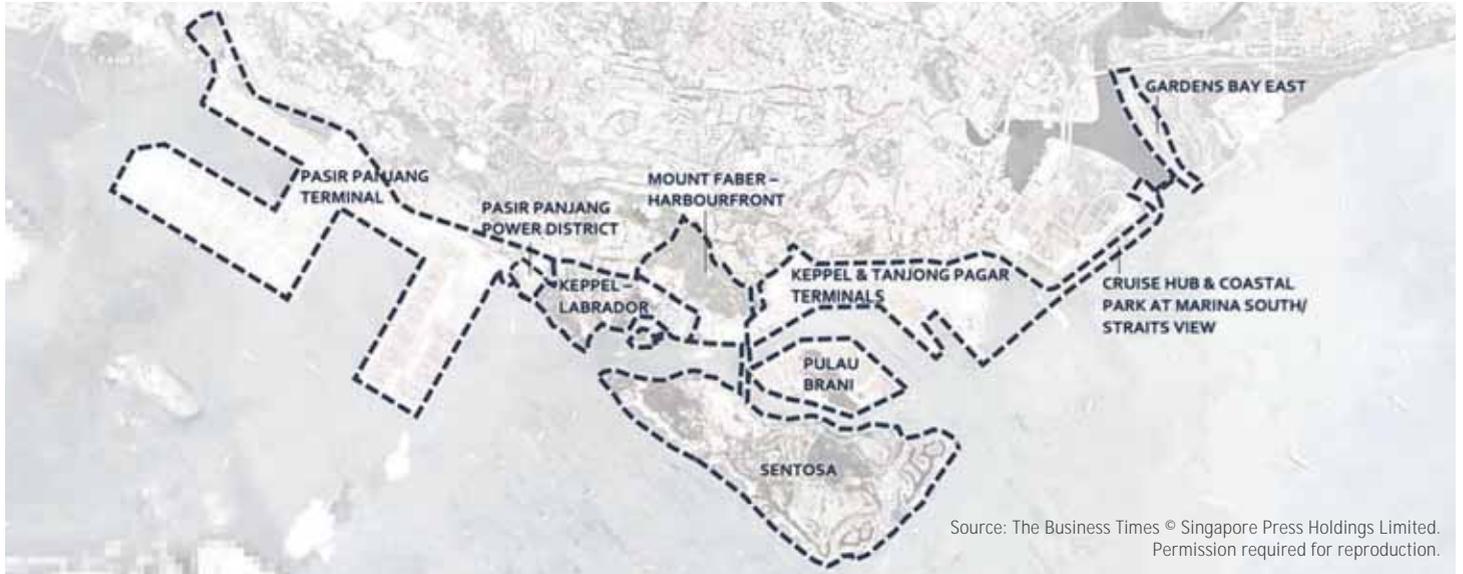

Nicholas Mak, head of research & consultancy at ZACD Group, high-

lighted that height restrictions around the air base may be lifted. As a result, there could be redevelopment of some older buildings in the vicinity of Paya Lebar, he added.

Desmond Sim, head of research (South-east Asia) at CBRE, said: “The relocation of the Paya Lebar airbase will free up 800 ha of land and the area will be transformed into a future new town, (which) has the potential to

be a new residential and commercial hub in the fringe area.”

Meanwhile, Huttons Asia head research, Lee Sze Teck, pointed out that the government is continuing to decentralise jobs from the central areas as it outlined more plans for Paya Lebar, Changi, Woodlands Regional Centre and Punggol Digital District under the Draft Master Plan 2019.

## The 4 pillars of the Greater Southern Waterfront under the URA Draft Master Plan 2019

1 Continuous waterfront promenade that connect various places of interest along the Greater Southern Waterfront in the future.

2 A possible Southern reservoir could be created between Tanjong Pagar and Pulau Brani to retain rainwater from the Greater Southern Waterfront. This may spring up an attractive network of canals through the urbanscape and provide connections to other destinations within the Greater Southern Waterfront.

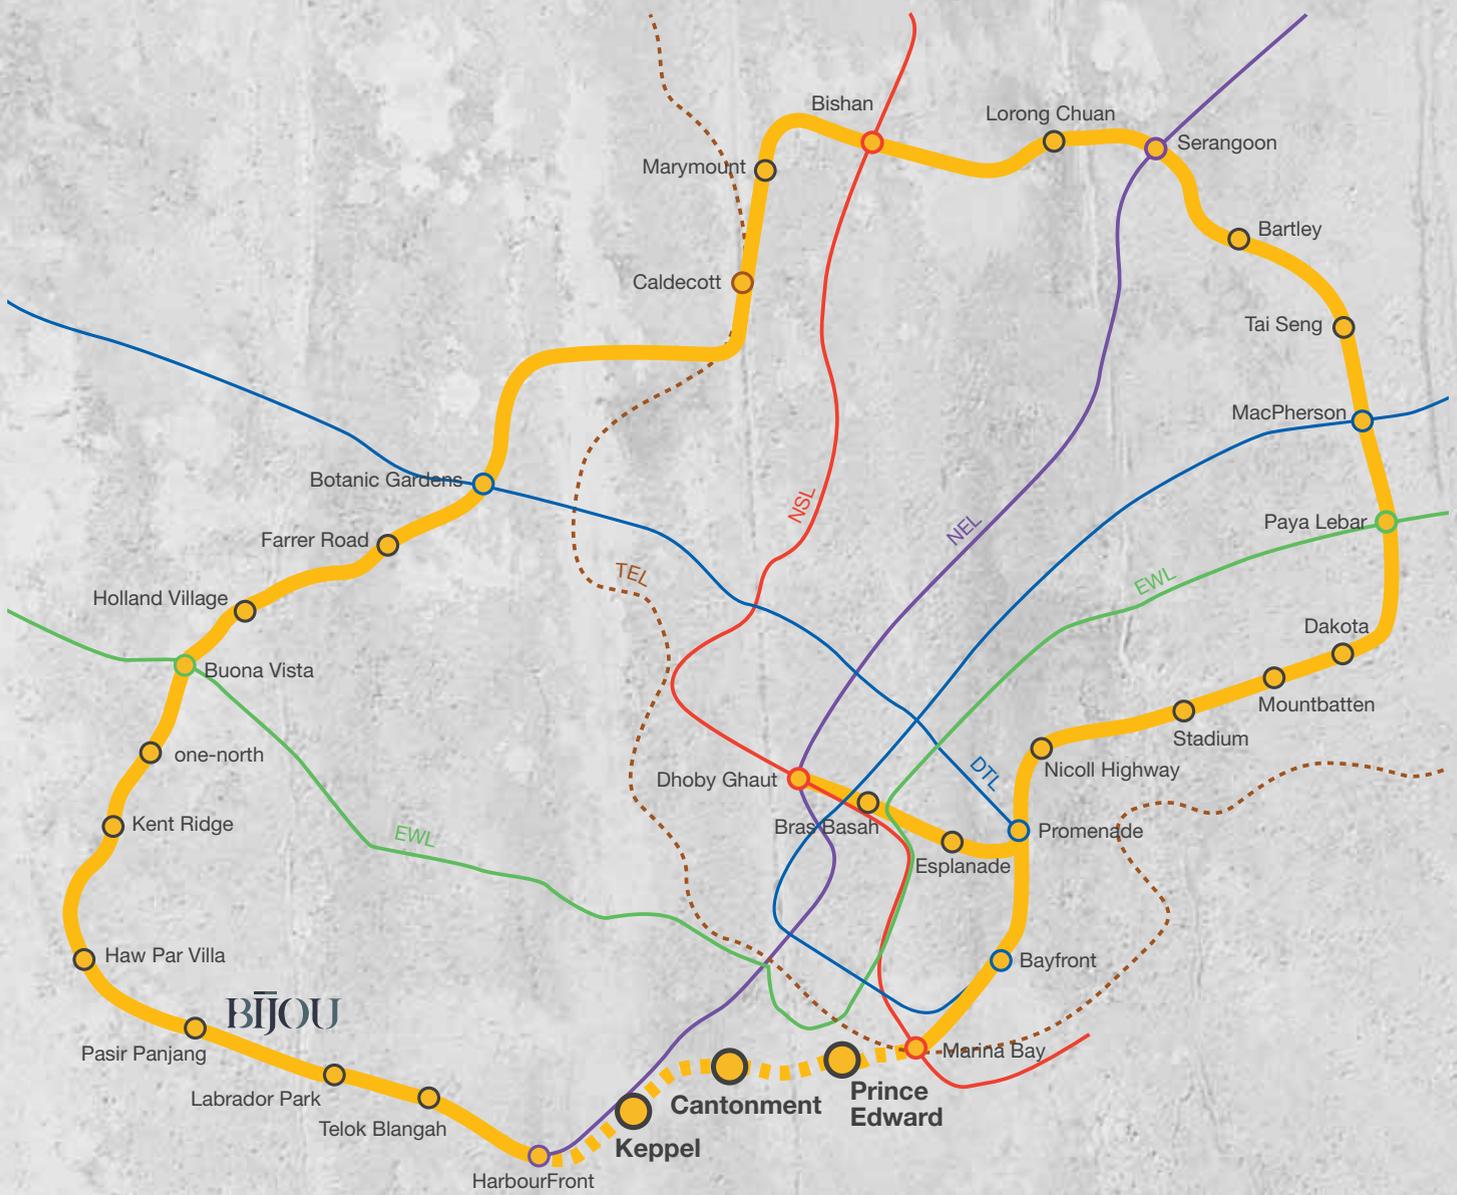

3 Connecting green and open spaces such as the new Pasir Panjang Linear Park that will connect West Coast Park to Labrador Nature Reserve, offering park users a glimpse of Pasir Panjang’s working container port and Power District up close.

4 The Greater Southern Waterfront is envisaged to be a futuristic city that is an extension of the Central Business District (CBD), marrying Singapore’s urbanscape and green pathways.

More than just islandwide connectivity, a curated choice of retail and F&B establishments surround the core of the development, making this mixed-use development a multi-faceted lifestyle address.

# DISCOVER CONNECTIVITY

The Circle Line is expected to be fully completed in 2025.  
It will connect commuters to 12 interchange stations  
and to the rest of Singapore.
